Sutton Press. Paperback. Book Condition: New. Paperback. 224 pages. Dimensions: 8.4in. x 5.4in. x 0.4in. PREPACE TO FIRST EDITION IN a retrospect of the last twenty-five years of British Agriculture some rather striking features are to be discerned which are worthy of a brief notice matters which may at first glance appear somewhat irrelevant to the subject in hand, but which nevertheless have a distinct bearing and influence upon the character and value of farm structures. During the period mentioned there has been a very great increase in the use of artificial fertilisers. Farmers now better understand the use and value of chemical manures to supplement the natural manure produced upon the farm. Concentrated feeding stuffs, too, the manurial residues of which are very valuable, are now in general use so much so, in fact, that farmers have been at their wits end during the last two years to make shift with a necessarily greatly reduced supply. Can it be said that the fertility of the land has increased in any marked degree as a result of the importation of so much manurial substance Has it become more productive Save that. , possibly, less home-grown corn has been consumed on the land, the manure produced from the consumption of farm crops has been returned thereto, and, with the addition of imported manurial substances, it might be expected that agricultural land would be in high condition. On a well managed farm this is doubtless the case, for with a proper appreciation of the nature and value of his manure the farmer takes steps to conserve it by the catchment of the liquid and the careful stacking of the solid. But the best results are impossible unless suitable drainage exists for the collection of liquid manure undiluted with surface water. Urine contains most...
