Practical work is outlined to illustrate each lecture. At the outset the use of the microscope is treated, and special consideration is given to microscopic measurement and to the reconstruction of microscopic objects in the solid. The plants chosen as subjects of study are necessarily limited in number. They have been selected, as fairly representing some of the more important subdivisions of the vegetable kingdom, and as being, at the same time, easy to procure. Attention is directed only to those points of their structure, life, history, and manner of living which are necessary in order that the student should appreciate some of the general principles of morphology, physiology, and evolution. The lectures deal first with the simpler forms, among which are to be found some of the most important so far as general biology is concerned. They then pass on to the more complicated, and gradually lead the student to some knowledge of the development, structure, and physiology of the higher plants.
